

Creating a Reddit APP

Step 1: Create a Reddit account:

Easy way to create an email: <https://protonmail.com/>

Easy way to create a Reddit username: <https://perchance.org/reddit-username>

Step 2: Create an app:

Go to Settings -> Safety & Privacy -> Manage third-party app authorization

The screenshot shows the Reddit 'User Settings' interface. At the top, there's a navigation bar with the Reddit logo, 'User Settings', a search bar, and various utility icons. Below this, there are three toggle settings for personalization, all of which are turned on. These are followed by an 'ADVANCED SECURITY' section header. Under this section, there is a toggle for 'Use two-factor authentication' which is currently turned off. At the bottom of this section is a link to 'Manage third-party app authorization' with an external link icon.

User Settings Search

Personalize ads based on your activity with our partners
Allow us to use your interactions with sites and apps we partner with to show you better ads. ☒

Personalize recommendations based on your general location
Allow us to use your city, state, or country (based on your IP) to recommend better posts and communities. ☒

Personalize recommendations based on your activity with our partners
Allow us to use your interactions with sites and apps we partner with to recommend better posts and communities. ☒

ADVANCED SECURITY

Use two-factor authentication
Help protect your account (even if someone gets your password) by requiring a verification code and a password to log in. ☐

[Manage third-party app authorization](#) →

The application needs to be a script application.

create application

Please [read the API usage guidelines](#) before creating your application. After creating, you will be required to [register](#) for production API use.

name

☐ web app A web based application

☐ installed app An app intended for installation, such as on a mobile phone

☒ script Script for personal use. Will only have access to the developers accounts
